Profile

Freelance Software Engineer with two years of experience building web and desktop applications. I take on interfaces, backend services, databases and deployment; the two projects below were built for my client Riviu. I enjoy finding the cause of a problem, discussing concrete examples and testing the finished product.

Technical skills

Frontend TypeScript, React, Next.js, Tailwind CSS

Backend & data Node.js, NestJS, REST API, PostgreSQL, SQL, Prisma

Desktop Rust, Tauri, React Flow

Tools Docker, Nginx, Linux, Git, GitHub, Playwright

Selected projects

Riviu Manager

Freelance for Riviu · Full product development

Built desktop software for managing multiple Android and iOS devices, with screen monitoring, device control and a visual Flow editor for repeatable workflows.

Separated device connections and workflow execution in Rust from the React interface. Bundled required components with the Tauri application to reduce installation steps.

Tauri, Rust, React, TypeScript, React Flow

Riviu Web

Freelance for Riviu · Full product development

Built the brand website, service and pricing pages, contact forms, content administration and a traffic analytics dashboard.

Separated the Next.js frontend and NestJS API, using PostgreSQL and Prisma for storage. Integrated Puck for editing and publishing page content, and deployed with Docker and Nginx.

Next.js, NestJS, PostgreSQL, Prisma, Puck
